DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 5, 7, and 8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 5 recites the limitations "the first spring means" in line 1, "the connecting road" in line 2, and "the second spring means" in line 4. There is insufficient antecedent basis for these limitations in the claim. The phrase "spring means" should be replaced with --resilient means--, and "connecting road" with --connecting rod--.

Claim 7 recites the limitation "a shift rail" in line 2. The shift rail has previously been claimed in claim 6.

Claim 8 recites the limitation "a plurality of shift rails" in line 3. A shift rail has previously been claimed in claim 6, and it is unclear whether the shift rail of claim 6 is included in the plurality of shift rails of claim 8.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3682

4. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat. No. 5,850,760 to Jin et al.

Jin et al disclose a compliant link with first and second members 10, 20 being interconnected by resilient means 72a, 74a providing compliance for loads in opposite directions. Relative movement between the members is limited. The members are connected by a rod 50 being movable relative to both members, first resilient means 72a between the rod and the first member 10 biasing the rod towards the second member 20 and into abutment with a stop formation 155 on the first member, second resilient means 74a between the second member and the rod biasing the rod away from the first member and into engagement with a stop formation 80 on the second member. A shift actuator 1 is directly connected to a shift rail 8 by the compliant link, via a selector member 3. The shift actuator may be connected to a plurality of shift rails by second lever 6.

Conclusion

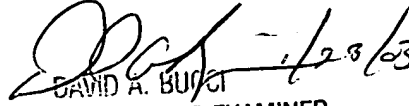

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art shows a variety of compliant links utilizing two springs and a connecting rod, including those used for actuating vehicular gearshift devices.
